

NOXYDE

NOXYDE is a single pack water-based elastomeric coating for metal roofs that offers unequalled corrosion protection and ease of application.

- Unrivalled corrosion protection and waterproofing
- Follows the movement of the roof as it contracts and expands
- 200% elasticity
- Protects against cracking and peeling
- Prevents rust from spreading
- UV-resistant and protects against abrasion

NOXYDE is a water-based, single-component paint; it is easy to apply and yet gives the same protection as a complicated and more expensive polyurethane system. Independent research as per the ISO 12944 standard demonstrates that Noxyde is the absolute BEST in corrosive protection - it even offers more than 15 years of protection in the highest corrosion class **C5-M**.

NOXYDE PEGARUST

This rust preventing coating is the solvent-based version of NOXYDE® that can be applied in cold temperatures down to 0°C or on damp surfaces.

- Excellent corrosion protection and waterproofing
- Applicable in cold temperatures down to 0°C or on damp surfaces
- Protects against cracking and peeling
- Prevents rust from spreading
- Suitable for corrosion class **C5-M** according to ISO 12944
- UV-resistant and protects against abrasion

NOXYDE® PEGARUST is a primer and topcoat in one and can be applied directly on various metallic substrates. It guarantees durable protection through the unique elastic and waterproofing binder technology. Characteristic is the outstanding adhesion: NOXYDE® PEGARUST can even be applied on moist surfaces and in damp weather.
